Seamless. Strong. Stunning.

LIVING UP TO EXPECTATION

The frame is built to stay strong and steady, without bending or warping over time. Thanks to its seamless, high-strength construction, the doors and windows feel solid and durable, giving you frames that are made to last

The coating at the door and window joints is exceptionally uniform, ensuring a clean, refined appearance and enhanced long-term durability.

TRADITIONAL PRODUCTS VS. ADVANCED SYSTEM WINDOWS

VS Diagram For Traditional product Details And Advaced SystemWindows

AESTHETICS

Simple design — plain glass, basic frames. Fits older or modest construction styles. Sometimes easier/cheaper to install.

More modern & flexible: multiple frame materials thermally-broken aluminum, composites), cleaner look, possibility of tinted/coated glass, sleeker profiles. Better fit for contemporary design or custom architecture.

SOUND INSULATION

Minimal — a single pane allows external noise (traffic, neighbours etc.) to pass easily.

Much better — multi-pane windows (with air or inert-gas gap) dampen outside noise significantly; double glazing can reduce external sound considerably compared to single-pane.

SEALING PERFORMANCE

Poorer sealing: because only one pane + basic framing, there's more heat transfer, drafts, potential condensation or leaks — especially problematic in humid or variable climates

Lower — over time there may be thermal discomfort, drafts, noise intrusion, possible moisture/condensation problems, and greater wear on frame or glass in harsh weather.

STABLE PERFORMANCE

Better sealing: insulated glass units (IGUs) with a sealed gap slow down heat transfer, reduce condensation/moisture issues, help maintain a stable indoor climate.

Higher — improved insulation and sealing help maintain comfort; better resistance to weather, less maintenance; more consistent performance over years.

CORNER CONNECTION TECHNOLOGY

The system utilizes precision pin-glue injection with high-strength aluminum corner connectors to ensure stable, perfectly aligned joints. Reinforced corner brackets and structural inserts improve load-bearing strength and minimize deformation over long-term use. A dual-layer reinforcement increases torsional resistance while preserving a clean exterior, and enhanced sealing at all junctions prevents moisture ingress. Designed as pre-engineered aluminium doors and windows, this system meets universal standards in window design, delivering consistent dimensional stability, durability, and reliable performance for modern applications.

HIGH-STRENGTH CORNER DESIGN FOR MAXIMUM DURABILITY

The corner block reinforcement process strengthens doors and windows by creating secure, precisely aligned corner connections that enhance angular rigidity and overall frame stability. This design improves resistance to impacts, strong winds, and temperature fluctuations, ensuring long-lasting durability and dependable performance. Engineered as pre-engineered aluminium doors and windows, the system follows universal standards in window design, delivering strength, stability, and reliability for demanding environments.

PRECISION-ENGINEERED CORNER JOINTS FOR LASTING WINDOW PERFORMANCE

Our aluminium window frame corner joints are engineered for exceptional strength, airtight sealing, and long-lasting durability, using high-grade alloys and precision machining to ensure rigid alignment, superior load distribution, and resistance to twisting, warping, and environmental stress, while delivering a clean, seamless aesthetic—making them ideal for pre-engineered aluminium doors and windows built to meet universal standards in window design.

PROFESSIONAL SOUND INSULATION

Triple sound insulation technology achieves a noise reduction rate of 83%.

Featuring a multi-cavity structural design, insulated glass, triple sealing strips, and an advanced pin-injection process, this product is engineered to reduce noise, enhance comfort, and support a better future urban living environment through continuous innovation.

HIDDEN DRAINAGE SYSTEM

Hidden drainage system

The concealed drainage system prevents drain holes from facing wind vents, reducing rainwater backflow and efficiently directing water outdoors, while also minimizing howling wind noise

HL IMPERIAL SLIM SYSTEM-SS 2

The All-Way Concealed Frame Option for HL Imperial Slim System is the ultimate expression of minimalist design, with the entire frame and track hidden within the surrounding walls. This system creates a stunning, frameless opening, giving the illusion of a clear, uninterrupted glass panel that slides effortlessly into a pocket. It's the perfect choice for high-end architectural projects where the goal is to achieve an unparalleled sense of openness and sleek sophistication.

Technical Specification For OP2

- ✦ Track Frame Width : 225 MM
- ✦ Track Frame Height : 105 MM
- ✦ Interlock Sightline : 17 MM
- ✦ Glass Thickness : 20 MM To 38 MM
- ✦ Max. Shutter Height : 6000 MM
- ✦ Max. Shutter Width : 3500 MM
- ✦ Locking Type : Multi Locking (Top-Bottom)
- ✦ Mosquito Net : NO
- ✦ Roller Capacity : Up to 500 kg

HL VISTA SLIM SYSTEM

HL Vista Slim: Where Architectural Vision Meets Uncompromising Luxury

Introducing the HL Vista Slim Sliding System from H-line, a truly bespoke solution crafted for those who demand nothing less than perfection. This extra-premium range is engineered for an elite clientele discerning projects worldwide, offering an unparalleled canvas of light and view. Our commitment to slimmest sightlines means the robust, precision-engineered frame virtually disappears, leaving an expansive, crystal-clear expanse that blurs the lines between indoor comfort and the grandeur of the outdoors. Beyond its aesthetic look, the Vista Slim boasts flawless, silent operation and exceptional durability, constructed from the finest materials to ensure lasting elegance and security. Choose the Vista Slim Sliding Window to transform your space into an extraordinary sanctuary of light, openness, and sophisticated living.

Technical Specification

- ✦ 2 Track Frame Width : 150 MM
- ✦ 3 Track Frame Width : 217 MM
- ✦ Track Frame Height : 31MM
- ✦ Interlock Sightline : 17 MM
- ✦ Glass Thickness : 12MM TO 32 MM
- ✦ Max. Shutter Height : 4500 MM
- ✦ Max. Shutter Width : 3000 MM
- ✦ Locking Type : Multi Locking (Top-Bottom)
- ✦ Mosquito Net : Pleated
- ✦ Roller Capacity : Up to 300 Kg

HL ULTRA SLIM SYSTEM

Redefining Transparency: Our Ultra Slim System

Step into a new dimension of architectural brilliance HL Ultra Slim Sliding Windows. Designed to deliver the ultimate in minimalist aesthetics, these windows feature profiles so incredibly narrow, they virtually disappear, creating a stunning effect of **pure, uninterrupted glass**. Experience an unprecedented influx of natural light and breathtaking, panoramic views that seamlessly merge your indoor and outdoor living spaces. Perfect for contemporary homes and avant-garde designs in Surat, these windows embody modern sophistication, offering a truly invisible barrier that elevates your property with unparalleled elegance and openness.

TECHNICAL SPECIFICATION

- ✦ 2 Track Frame Width : 118 MM
- ✦ 3 Track Frame Width : 173 MM
- ✦ Frame Height : 28 MM
- ✦ Interlock Sightline : 19 MM
- ✦ Glass Thickness : 5 MM To 20 MM
- ✦ Max. Shutter Height : 3600 MM
- ✦ Max. Shutter Width : 2000 MM
- ✦ Locking Type : Multi Locking (Top-Bottom)
- ✦ Mosquito Net : Pleated
- ✦ Roller Capacity : Up to 250 Kg
- ✦ Wind Load Capacity : 2 KPA

HL RETRO GULF SLIM SYSTEM

Embrace Timeless Charm with Our HL RETRO GULF SYSTEM

The HL Retro Gulf Slim System Aluminium Window is designed to provide a modern look with slim profiles and strong durability. It offers excellent ventilation, smooth operation, and resistance to rust and weather conditions. This system is ideal for stylish homes and commercial spaces, combining elegance with long-lasting performance.

Technical Specification

- ✦ 2 Track Frame Width : 100MM
- ✦ 3 Track Frame Width : 150MM
- ✦ Frame Height : 41 MM
- ✦ Interlock Sightline : 25 MM
- ✦ Glass Thickness : 5 MM To 23 MM
- ✦ Max. Shutter Height : 3500 MM
- ✦ Max. Shutter Width : 2000 MM
- ✦ Locking Type : Single / Multi Point Locking
- ✦ Mosquito Net : Shutter / Pleated

HL ECO GULF SLIM SYSTEM

Discover how to enhance your home's aesthetics & natural light without exceeding your budget with HL ECO GULF SYSTEM.

The HL Eco Gulf Slim System Aluminium Window offers a sleek design with strong and durable aluminium frames. It provides excellent ventilation, weather resistance, and low maintenance. Its slim profile enhances modern interiors while allowing maximum natural light.

Technical Specification

- ✦ 2 Track Frame Width : 83MM
- ✦ 3 Track Frame Width : 120MM
- ✦ Frame Height : 41 MM
- ✦ Interlock Sightline : 19 MM
- ✦ Glass Thickness : 5 MM To 11.5 MM
- ✦ Max. Shutter Height : 2100 MM
- ✦ Max. Shutter Width : 1200 MM
- ✦ Locking Type : Single / Multi Point Locking
- ✦ Mosquito Net : Shutter / Pleated
- ✦ Roller Capacity : Up to 80 kg

HL 50 CASEMENT DOOR

Grand Openings, Unyielding Performance: Our HL 50 Heavy-Duty Casement Door System

The HL 50 Casement Door Aluminium Window System is designed for durability, smooth operation, and modern aesthetics. It offers strong aluminium framing with excellent ventilation and weather resistance. Ideal for homes and commercial spaces, it combines functionality with a stylish finish.

Technical Specification

- ✦ Frame Width : 50 MM
- ✦ Frame Height : 46 MM
- ✦ Glass Thickness : 5 MM To 38 MM
- ✦ Max. Shutter Height : 2500 MM
- ✦ Max. Shutter Width : 1350 MM
- ✦ Locking Type : Multi / Single

HL 40 CASEMENT WINDOW

Smart Solutions for Compact Spaces: Our HL 40 Casement Window System

The HL 40 Casement Door Aluminium Window System features a durable aluminium frame with a sleek and modern design. It provides smooth operation, good ventilation, and resistance to rust and weather conditions. Suitable for residential and commercial spaces, it offers strength, style, and low maintenance.

Technical Specification

- ✦ Frame Width : 40 MM
- ✦ Frame Height : 39 MM
- ✦ Glass Thickness : 4MM To 24 MM
- ✦ Max. Shutter Height :1900 MM
- ✦ Max. Shutter Width : 700 MM
- ✦ Locking Type : Multi / Single

NEXUS SERIES WITH INTEGRATED RAILING

Premium Sliding Windows & Doors

- Crafted with specially-developed 6063 T6 alloy for exceptional strength and a flawless finish
- Slim, contemporary designs with a sleek aerodynamic interlock for added durability
- Fly mesh solutions expertly designed to keep insects out
- Certified for superior resistance to extreme weather conditions

Why Choose HL Bifold Sliding Folding System?

When it comes to combining modern design, advanced security, & smooth functionality, the HL Bifold Sliding Folding System stands out as the perfect choice.

Here's why

Effortless Operation

Premium stainless-steel rollers ensure smooth, quiet, and easy sliding, even with heavy loads.

Unmatched Security

Equipped with a multi-point lock body, shootbolt configuration, and anti-burglary hinge design for maximum protection.

Durability That Lasts

Built with wear-resistant materials, offering high load-bearing capacity and long service life.

Perfect Sealing

Small sealing strips ensure tight closure, keeping interiors safe, energy-efficient, and dust-free.

Modern Aesthetics

Sleek design adds elegance to any space—whether it's a luxury home, office, or commercial property.

Smart Engineering

Adjustable and fixed hinge options eliminate common installation issues like sash droop or over-adjustment.

A system built for strength, style, and long-term performance.
